

PRECISION SHEET METAL MANUFACTURING

A clean, controlled manufacturing partner for prototypes, job work and production batches.

Built for precision sheet-metal work

From DXF to finished bent components — with process control at every stage.

01

Cut

Laser cutting for MS, SS, aluminium and sheet-metal profiles with controlled nesting and first-piece approval.

02

Bend

CNC press brake bending with tooling selection, bend sequence review and angle verification.

03

Control

Inspection, traceability, material records and customer-ready quality reports.

04

Deliver

Clean packing, dispatch clearance and committed delivery tracking.

ONE SHOP. MULTIPLE METAL SOLUTIONS.

- ✓ Laser cutting
- ✓ CNC bending
- ✓ Deburring and finishing coordination
- ✓ Inspection and dispatch documentation

6 kW

fiber laser capability

150 Ton Press Brake

Bending machine capability

DXF → Part

engineering-to-production workflow

Batch + Prototype

suitable for small and repeat jobs

Laser cutting capability

Fast, clean and repeatable cutting with controlled process parameters.

What customers get

- ✓ DXF review before cutting
- ✓ Nesting review for material utilization
- ✓ First-piece cut approval
- ✓ Burr / dross / edge quality checks
- ✓ Thickness-wise cutting parameter master

Typical materials

MS • SS • Aluminium • GI • Brass* • Copper*

*Final feasibility depends on thickness, grade, gas and edge-quality requirement.

CNC bending capability

Bending quality is controlled before production, not corrected after rejection.

Bending control points

- ✓ Minimum flange and bend feasibility review
- ✓ Punch / die selection record
- ✓ Bend sequence approval
- ✓ First bend angle approval
- ✓ Tool marks, cracks and reverse bend checks

Result: predictable dimensions, fewer reworks and cleaner formed parts.

Engineering support that reduces customer effort

We help convert drawings into manufacturable sheet-metal parts.

- | | | |
|----|---------------------------|--|
| 01 | Drawing review | Material, thickness, bend notes, tolerance and revision check. |
| 02 | DXF cleanup | Scale, duplicate entities, open profiles and layer review. |
| 03 | Flat pattern check | Bend allowance, K-factor and development approval. |
| 04 | Bend feasibility | Minimum flange, hole-to-bend distance and tooling clearance. |
| 05 | Revision control | Latest file confirmation before production release. |

Customer workflow

A simple production flow designed for speed, clarity and traceability.

Traceability is captured at each stage: customer PO, drawing revision, material heat number, program file, operator, inspection and dispatch.

Quality documentation customers can trust

Simple forms for operators. Professional records for customers.

✓ Material traceability

Grade, thickness, heat/batch number and MTC tracking.

✓ Inspection records

Laser cut, bend dimension, final inspection and dispatch clearance.

✓ Issue control

NCR, rework, customer deviation and corrective action format.

✓ Calibration control

Instrument list, due dates and status visibility.

WHY CUSTOMERS CHOOSE **SPINDEL**X

01

Speed

Quick quotation, planned cutting and tracked dispatch.

02

Clarity

Simple communication from drawing review to delivery.

03

Control

First-piece approvals, inspection and document records.

04

Support

Design and manufacturing feedback from an engineering team.

Engagement models

Flexible options based on your requirement and volume.

Prototype support

Small quantities, quick DXF review, sample development and feedback.

NEW PARTS

Production job work

Repeat batches with fixed parameters, inspection records and delivery plan.

REPEAT WORK

Development partner

Design review, flat pattern, bend feasibility and product-to-production support.

ENGINEERING

For fastest quotation

Send complete inputs once. We will take it forward systematically.

- ☐ **Drawing / DXF** PDF drawing + DXF flat pattern / 3D file if available
- ☐ **Material** Grade, thickness, finish and certificate requirement
- ☐ **Quantity** Prototype, trial batch or production volume
- ☐ **Operations** Cutting only / cutting + bending / fabrication / finishing / secondary processes
- ☐ **Delivery** Required date, packing instruction and dispatch address

Tip: Latest drawing revision and clear tolerance notes avoid delay and rework.

Industries we serve

Precision sheet-metal solutions for product companies, machine builders and production teams.

01 Machine Builders & SPM

Frames, guards, covers, brackets, machine panels and custom sheet-metal parts.

02 Automation & Robotics

Robot cells, sensor brackets, automation enclosures, conveyors and fixtures.

03 Electrical Panels

Control cabinets, panel doors, gland plates, cable trays and busbar supports.

04 Medical Equipment

Clean sheet-metal parts, covers, carts, brackets and equipment enclosures.

05 Automotive & EV

Prototype parts, production brackets, battery support plates and assembly fixtures.

06 Aerospace & Defense

High-accuracy plates, brackets, covers and low-volume precision fabrication.

07 Architecture & Interiors

Decorative panels, signage, partitions, railings and custom metal features.

08 Product Development

Fast prototypes, DFM support, pilot builds and repeatable small-batch production.

Ideal for customers who need quality, speed and engineering support — not just cutting.

LET'S BUILD BETTER SHEET-METAL PARTS.

Laser Cutting • CNC Bending • Fabrication Support • Quality Documentation
